

Study Material
for
AWS Certified Cloud Practitioner (CLF-C02)

MCQs:

Q1 Which statement best describes cloud computing?

- A. Running applications only on local servers**
- B. Using a network of remote servers over the internet to store, manage, and process data**
- C. Using only virtual machines**
- D. Hosting applications only in private data centers**

Q2 A company purchases physical servers for a single application and is responsible for maintenance, upgrades, and security. Which hosting model is being used?

- A. Cloud Hosting**
- B. Shared Hosting**
- C. Dedicated Server**
- D. VPS**

Q3 Which hosting model offers the greatest flexibility, scalability, and cost efficiency?

- A. Dedicated Server**
- B. Shared Hosting**
- C. VPS**
- D. Cloud Hosting**

Q4 Which company is recognized as the leading cloud service provider?

- A. VMware**
- B. Oracle**
- C. AWS**
- D. OpenStack**

Q5 A Cloud Service Provider (CSP) typically offers:

- A. Infrastructure as a Service**
- B. APIs**
- C. Automation via Infrastructure as Code**
- D. All of the above**

Q6 Which of the following is considered a Tier-1 Cloud Provider?

- A. AWS**
- B. OpenStack**
- C. DigitalOcean**
- D. Vultr**

Q7 Amazon EC2 is an example of which cloud service category?

- A. Storage**
- B. Database**
- C. Compute**
- D. Networking**

Q8 Amazon S3 primarily belongs to which category?

A. Compute

B. Storage

C. Database

D. Analytics

Q9 Amazon VPC belongs to which category?

A. Networking

B. Storage

C. Security

D. Database

Q10 What is the primary function of a hypervisor?

A. Manage databases

B. Run virtual machines

C. Cache content

D. Encrypt storage

Q11 Which technology allows multiple containers to share the same operating system kernel?

A. Hypervisor

B. Docker Daemon

C. Route 53

D. EC2 Auto Scaling

Q12 Which computing model is commonly referred to as "serverless"?

A. Containers

B. EC2

C. Functions

D. Dedicated Servers

Q13 A company uses Salesforce CRM without managing any infrastructure. Which cloud model is this?

A. IaaS

B. PaaS

C. SaaS

D. Hybrid Cloud

Q14 Which cloud model provides operating systems, networking, storage, and compute resources?

A. SaaS

B. PaaS

C. IaaS

D. FaaS

Q15 Developers deploy applications without managing underlying hardware. Which service model is most suitable?

A. SaaS

B. PaaS

C. IaaS

D. On-Premises

Q16 A company hosts all workloads in AWS and has no on-premises infrastructure. This is an example of:

A. Hybrid Cloud

B. Cross Cloud

C. Public Cloud

D. Private Cloud

Q17 A company uses both AWS and its own data center. Which deployment model is this?

A. Public Cloud

B. Hybrid Cloud

C. Private Cloud

D. Community Cloud

Q18 Using AWS, Azure, and Google Cloud simultaneously is known as:

A. Hybrid Cloud

B. Public Cloud

C. Multi-Cloud

D. SaaS

Q19 Which cloud benefit allows customers to pay only for resources they consume?

A. Scalability

B. Elasticity

C. Pay-as-you-go

D. Reliability

Q20 Which AWS Cloud benefit reduces the need for large upfront capital expenditures?

A. Global Reach

B. Elasticity

C. Operational Excellence

D. Trade Capital Expense for Variable Expense

Q21 What is the benefit of launching resources in minutes instead of weeks?

A. Reliability

B. Agility

C. Security

D. Fault Tolerance

Q22 What is an AWS Region?

A. A single data center

B. A collection of Availability Zones in a geographic area

C. A VPC

D. A subnet

Q23 What is an Availability Zone (AZ)?

A. A physical location consisting of one or more data centers

B. A Region

C. A VPC

D. An Edge Location

Q24 Which characteristic is true about Availability Zones within a Region?

A. They share the same power source.

B. They are physically isolated from each other.

C. They exist in different Regions.

D. They are connected through the public internet.

Q25 Which AWS service is considered a global service?

A. EC2

B. RDS

C. IAM

D. EBS

Q26 To achieve high availability, AWS recommends deploying resources across:

A. Multiple accounts

B. Multiple Regions only

C. Multiple Availability Zones

D. Multiple VPCs only

Q27 A fault domain is designed to:

A. Increase storage capacity

B. Limit the impact of failures

C. Improve IAM security

D. Reduce bandwidth

Q28 What is the AWS Global Network?

A. AWS's private backbone network

B. Public internet

C. VPN service

D. Direct Connect service

Q29 Which service uses Edge Locations to cache content closer to users?

A. EC2

B. RDS

C. CloudFront

D. Lambda

Q30 Which AWS service accelerates uploads to Amazon S3 using Edge Locations?

A. AWS Backup

B. S3 Transfer Acceleration

C. Storage Gateway

D. Snowball

Q31 What is the primary benefit of AWS Direct Connect?

A. Public internet connectivity

B. Dedicated private connection to AWS

C. Serverless computing

D. Content delivery

Q32 Compared with internet-based connections, AWS Direct Connect typically provides:

A. Higher latency

B. Lower security

C. More consistent network performance

D. Less bandwidth

Q33 What is a Point of Presence (PoP)?

A. AWS Region

B. AWS Data Center

C. Intermediate location between AWS and users

D. Availability Zone

Q34 Which AWS service relies heavily on Edge Locations?

A. IAM

B. CloudFront

C. RDS

D. EBS

Q35 AWS Local Zones are designed to provide:

A. Global redundancy

B. Lower latency for specific metropolitan areas

C. Identity management

D. Cross-region replication

Q36 AWS Wavelength is designed for:

A. Data archiving

B. Edge computing on 5G networks

C. Backup operations

D. IAM authentication

Q37 What is Data Residency?

A. Data encryption

B. Physical/geographic location where data resides

C. Data backup strategy

D. Data compression

Q38 Which AWS service continuously evaluates resource configurations for compliance?

- A. CloudTrail**
- B. Config**
- C. Trusted Advisor**
- D. Inspector**

Q39 Which AWS service can restrict access to specific AWS Regions?

- A. Route 53**
- B. CloudFront**
- C. Service Control Policies (SCPs)**
- D. Auto Scaling**

Q40 AWS GovCloud is primarily intended for:

- A. Media streaming**
- B. Gaming workloads**
- C. Government and regulated workloads**
- D. Machine learning experiments**
